# Waterpark Incident Reports

Incident Reporting Form

Date: July 14

Time: 2:00 2:45

Person Filling out form:

Individuals Involved (attach another sheet if more space needed)

Name	Contact #	Age
[Redacted]	[Redacted]	[Redacted]
[Redacted]	( )	[Redacted]
[Redacted]	( )	[Redacted]

Description of what occurred (attach another sheet if more space is needed)

[Redacted] walked to the office on her own. I took her to the back + sat her on the wheelchair. I quickly put on a pair of gloves, grabbed a bunch of paper towels + started to apply pressure on the bloody foot. In the span of 30 seconds there was blood spouting out of somewhere along her foot. I could not tell from where as I just grabbed more paper towel to try to contain the blood I then asked [Redacted] to walkie for another person to come + help me. I then kept putting pressure until [Redacted] came in + told me what to do next.

Actions taken (attach another sheet if more space is needed)

I got called off landing when I got to first aid room I saw a lot of blood. I quickly put on gloves and helped [Redacted] apply more paper towel. The lady seemed like she was going to faint there was so much blood I had [Redacted] call the ambulance [Redacted] came back to help hold pressure the paramedics told us to get a clean dry cloth so I wrapped that on the wound we had given her some water but once we had the paramedics on the phone they said no more water instead we gave her ice packs to hold onto because

on the phone

Follow up needed? (yes/no) July 15

What occurred?

---

She was on tube ride and cut her toe on the large crack in the last pool before landing it was her right foot more on the posterior side but with how much blood it was hard to see and [REDACTED] had already wrapped the wound so I didn't want to take it off until paramedics arrived

[REDACTED]

██████████

We had just reopened the hot tub after following Frasar Health guidelines on a result of a person regurgitating into the water. After shocking the hot tub and then backwashing, ██████████ and I held people back from entering for 35-40 minutes and didn't let bathers back in until the chemicals were back to normal.

At that point I went to the office and sat down, when a gentleman came to the office to advise me of a slight irregularity in the tube ride at the bottom of one of the slides. I went straight out and took ██████████ with me. ██████████ knew where it was located.

At first observation it was difficult to spot. I watched a few slide pass over it and it was fine. We realized you could miss the area by sliding close to the side, which I asked ██████████ (the slide attendant at 3<sup>rd</sup> chair position at that time) to do.

At that point I decided to close the tube line and shut the ride down and asked ██████████ to help me shut the line down. We let the few people left in the line have that last turn, I left ██████████ and went to grab the barricades to stop guests from getting in line and to block all access off.

As I was putting the barricades up, I then noticed the young girl ██████████ on the deck with ██████████ (the first aid attendant).

At that point we took everybody out of the tube ride and went into the pump room and shut the ride down. In the next 10-15 minutes the slight abrasion in the slide had become about 4 inches most likely from the water pressure.

██████████

Description of what occurred (attach another sheet if more space is needed)

I was standing near third chair in the pool before the crack. I was guiding people down the slides like normal and I saw [Redacted] inspecting the pool with the crack. I asked [Redacted] if I should stop sending people down, he said no and to just push people down one by one and do my best to push people in a way they wouldn't get hurt. So I did what I was told and it was going pretty well. Along came more people and that included [Redacted], I was pushing people down one by one and [Redacted] and her friends were pulling themselves down by picking up their tubes and jumping on them. [Redacted] went down last out of her friends and I gave her a tiny push but not really. I saw her go down and didn't think anything happened, until I saw

**Description of what occurred** (attach another sheet if more space is needed)

I was blocking off tube slide so no one else was let down the slide. As I was collecting tubes to put them away I noticed a girl sitting on the edge of the pool with a distressed look on her face.

[Redacted]

I immediately alerted a nearby lead ([Redacted]) to come assist the girl so that I could quickly rush and call 911. After I stayed on the line with 911 and didn't return back to scene.
